Barbarah Martinez, RN, BSN, Houston Department of Health and Human Services

OBJECTIVES

1. Define case management as it pertains to tuberculosis (TB).
2. Identify components of a patient assessment and the development and implementation of a treatment care plan identifying potential or existing health problems.
3. Identify social information needed for case management.
4. Describe the monitoring process for adverse drug events and patient infectiousness using proper nursing interventions.
5. Describe the components of an effective TB prevention and care program including personal respiratory protection.
6. Discuss the impact of the guidelines on contact investigation evaluation and treatment of persons exposed to TB.
7. Describe how to assess continuity of care during and after hospitalization.
8. Analyze documented data to evaluate for patient success.
9. Describe the process for completion of treatment.
